DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-16 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 1 102 212 A2 by Lee et al. ("Lee").

For claim 1, Lee discloses dividing a bin value into $N+1$ regions using N threshold values, and dividing and quantizing the divided regions uniformly and more finely with respect to each region that is nearer to zero (see figure 3).

For claim 2, the first threshold value is zero or almost zero (see paragraph 39).

For claims 3 and 4, the first region is one value, which is a single value (see column 6 line 20).

For claim 5, the $N+1$ regions are non-uniform regions (see paragraph 30).

For claim 6, the threshold values are listed in paragraph 39.

For claims 7 and 8, the values are shown in the table in column 6.

For claim 9, Lee separates the bin values into non-uniform regions, and represents a bin value within each region uniformly (see paragraph 39).

For claim 10, the first region has a single bin value (see the table in col. 6).

For claim 11, the other regions are divided by integers (see the table).

For claim 12, two integers are not equal (see the table).

Art Unit: 2635

For claim 13, the inequality is satisfied by the thresholds listed in paragraph 39.

For claim 14, representing bin values with 8 bits is discussed in paragraph 38.

For claim 15, of course 8 bits represent 256 values (as shown by the sum of levels in the table, which equals 256).

For claim 16, quantizing bin values is discussed in the title and abstract.
